## Medical Alarm

Introducing the **smartest** way to stay in touch with the people who matter when it **matters**

# blue phone

## Smart & Simple

Blue phone is a highly featured, yet simple to use medical alarm telephone that comes complete with a remote emergency pendant. Blue Phone is specifically designed for independent living arrangements within retirement villages but is equally appropriate for use in the family home.

Wherever you are in your home, simply pressing the pendant will establish a high quality, loud speaking voice contact link between your home and a professional monitoring centre or directly to your family/carer contact.

**Smart Caller has been supporting health care professionals by designing and manufacturing emergency call systems in Australia for more than 25 years.**

Blue Phone & Pendant

## Retirement Village Applications

Specialist agedcare professional monitoring centres and several hundred Retirement Villages have chosen the Smart-Caller emergency-call telephone.

This is due largely to its enviable on-site/off-site monitoring capabilities, two way speech quality and safeguard communication back-up facilities

**When professionally monitored Blue Phone exceeds Australian standards AS 4607 and is manufactured to ISO9002 Quality Accreditation.**

### Family monitoring

If preferred Blue Phone can dial directly to family and friends providing quality two-way voice contact just as it does when professionally monitored. With family monitoring there are no ongoing monitoring fees. Blue phone is the only medical alarm telephone that can be both professionally and family monitored and sometimes as the circumstances change, the need to switch to independent professional monitoring also occurs.

### Using "000" Emergency Services

Telstra's 000 emergency services have approved Blue Phone for use on this service. However 000 must be the last resort contact incase family and friends have not accepted the call.

## Home Security Devices

### Daily OK (Inactivity Monitoring)

If your living alone you might want to think about switching on Blue Phone's Daily Call "OK" feature. This requires you to press the OK button each day before a chosen time. If the button is not pressed a reminder message will sound every ten seconds for ten minutes. Still if the OK button is not pressed, Blue Phone will call the monitoring centre or your support network reporting this condition.

### Optional Extra's

Blue Phone has a range of optional extra detection devices and can accommodate up to 48 radio inputs.

Wireless smoke alarms can report to your carer network a fire on the premises. Duress pendants (red) can raise a duress alarm as opposed to a medical alarm. Duress alarms proceed silently as not to exacerbate the situation. Utility transmitters allow the monitoring of any device with a closing contact.

### Home and Away Security

Wireless PIR sensors can detect movement in your home. When your home the PIR can help inform that you're OK and while you're away the PIR can report an intruder.
