## LATEST TECHNOLOGY BENEFITS

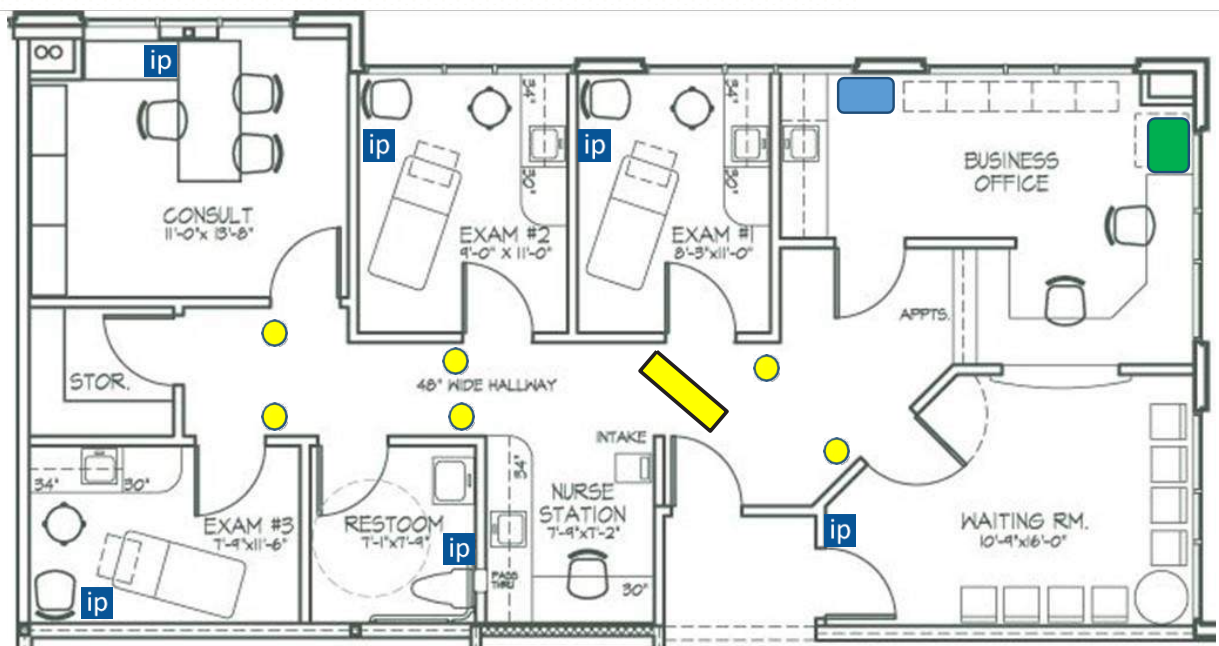

The ever-expanding range of expectations demanded by Aged and Health Care Professionals in pursuit of achieving their similarly expanding duty of care obligations is best achieved by the selective deployment of latest technologies.

This brings the True IP based Blueline-IP emergency call system into focus but does not exclude the total or partial deployment of long-range Wireless and short-range Bluetooth technologies. These optional add-on technologies variously accommodate Duress, RTLS (Real Time Tracking) plus Fall's detection and safe containment

of assets and patients. It's also possible to retrofit the Bluetooth modules for possible future requirements. The Blueline-IP Emergency Call System has been designed by Smart-Caller Engineers to accommodate and exploit all of these technologies as may be needed to reliably deliver the required system outcomes for any specific purpose or sized application.

All Blueline IP or wireless call-points can be supplied to include a range of Bluetooth and UHF wireless inputs to accommodate a wide range of accessories thereby ensuring a cordless bedside environment.

## TYPICAL MEDICAL CENTRE NURSE-CALL LAYOUT

- Call-Point
- Annunciator
- Overdoor LED
- Central Equipment
- Display Screen
