# LATEST TECHNOLOGY BENEFITS

As major suppliers of call systems to SRS (VIC) and SRF (SA) Supported Residential Accommodation we understand both the common needs whilst also making available the wide range of various accessories. Accordingly our systems include the choice of wireless and/or hardwired technologies with the further choice of both computer based and computerless system operation. There is also no practical limit to system size which can range from one to several hundred call-points.

The illustration below describes a typical low cost wireless system with Paging and Annunciator Display capabilities. Smartphone text messaging and detailed call logging and reporting would however, necessitate the computer option.

The flexible and economical BlueLine-ISM (Industrial, Scientific & Medical) Long Range wireless system has been the most popular nurse-call solution for Clinics and Special Accommodation. The system head-end equipment is supplied as a plug-and-play operating system which is usually contained within a small and attractive wall-mounting cabinet with lockable glass door. The total system is typically installed within one day without the need for costly cabling installation.

The wide range of wireless accessories include a wearable wireless transmitter supplied with necklace, wrist strap and pocket clip having Call, Cancel and Staff Assist or Duress signalling. Other accessories include wireless bed and chair-exit sensors, door-watch alerting stations, inactivity sensors and similar devices designed for Aged Care and NDIS applications.

# INFECTION CONTROL

Because Smart-Caller is a major supplier of nurse call systems to Hospitals and Aged Care Facilities its range of call-points and portable wireless pendants use push buttons that include Antibacterial/Antifungal treated silicon material along with washable call-point front surfaces. The system therefore offers an extremely high level of infection control.
